

BornAgain - Refactoring #1264

Refactor ParameterizedItem's different naming schemes

22 Dec 2015 15:05 - herck

Status:	Rejected	Start date:	22 Dec 2015
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:	Sprint 30		

Description

For the moment, ParameterizedItem has a property "Name", a QString modelType() and a QString displayName(). Since displayName() resolves ambiguities between children of the same type (by giving an extra index), this name should be displayed in the GUI (preferably using the property mechanism that automatically updates the corresponding views).

Is a user customized property "Name" still relevant or can we get rid of it?
