Description			
<pre>BA_CORE_API_ inline bool isnan(double x) { #ifdef _MSC_VER return _isnan(x); #else return std::isnan(x); #endif } BA_CORE_API_ inline bool isinf(double x) { #ifdef _MSC_VER return !_finite(x); #else return std::isinf(x); #endif }</pre>			
I'd expect the need for this be gone with C++11 ... who could test, please?
