This item should be extended to something more global. We can summarize here all shortcuts we have by now, and all required shortcuts.

Also one should distinguish between application-wise shortcuts, and shortcuts local for the View. For example, we have ctrl-r shortcut to run simulation, which works already from SampleView, so it is application wise.

- As for ctrl-Z - revert last action. Fully agree, that we need it, but we do not have, unfortunately, anything inside (i.e. "Command Pattern") to provide unddo/redo.

#2 - 18 Sep 2020 19:06 - wuttke

- Status changed from New to Backlog

- Priority changed from Normal to Low
