

BornAgain - Bug #2064

GUI: plots: weird behaviour when equalizing plots

29 May 2018 14:24 - dmitry

Status:	Backlog	Start date:	29 May 2018
Priority:	Low	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:			
Description			
<p>1. When selecting two plots with Shift, the first plot clicked will disappear. After switching to the another plot and back it reappears. 2. The command "Equalize selected plots" changes the z-axis of the wrong plot. For example, if "Equalize selected plots" --> "to job1" will change the z-axis of job1 (and vise versa).</p> <p>Tested on win.</p>			

History

#1 - 18 Sep 2020 18:21 - wuttke

- Subject changed from *Weird behaviour when equalizing plots* to *GUI: plots: Weird behaviour when equalizing plots*

#2 - 19 Sep 2020 10:16 - wuttke

- Subject changed from *GUI: plots: Weird behaviour when equalizing plots* to *GUI: plots: weird behaviour when equalizing plots*
