

BornAgain - Bug #2099

GUI: relative difference item in fit comparison requires revision

22 Jun 2018 12:55 - dmitry

Status:	Backlog	Start date:	22 Jun 2018
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:			
Description			
<p>1. Due to current machinery relative difference item is desynchronized each view/job switch. Carrying relative difference item into JobItem could solve this problem.</p> <p>2. Axis units switch resets value axis in relative difference plot (z in the case of 2D, y otherwise) to the data item limits, though defaults defined for relative difference should be restored</p>
