Refactoring # 240 (Rejected): Renaming campaign

rename "min" and "max" in TRange, ...

Target version:	Sprint 18		
Description			
In my mind, "min" and "max" designate the lowest and highest value actually realized.			
For the lowest and highest allowed value, I prefer "inf" and "sup" (infimum and supremum).			
Btw: why is inRange(..) implemented assymmetrically? correct name would then be: inHalfOpenInterval(..).			
Further name change proposal: getDifference() -> getSpan()

Walter thinks, inf and sup are possibly confusing as well.
- compare stdlib
- prefer lower_bound, upper_bound ?
