Target version:			

Description

Typical users don't need the whole periodic table of materials. Usually they work with a limited set of them. Some materials, especially polymers, may be not present in the general materials library.

For user convenience, should be possible to save these materials and be able to load them in GUI. So, that users can define them once and reuse in multiple GUI projects.

Suggestion: add Save and Load buttons to the Material Editor. Loaded materials should merge to the existing ones. Nothing should be deleted. In the case of conflicts, loaded materials should be renamed, for example Si -> Si(1) (or 2, 3, ... n).

History
